

TECHNOLOGY

A broad spectrum of technological advances will continue to revolutionize the way we transact business, communicate, travel and live our everyday lives. It is critical to couple the driving force of innovation with the guidance of wise legal counsel to successfully realize the potential that technology holds. We deploy a multi-disciplinary approach to counseling our technology clients and our diverse portfolio of other clients whose industries and business operations are impacted by modern and emerging technologies.

Our attorneys have the depth and breadth of experience to navigate clients through technology-related matters involving intellectual property, transportation, fintech, M&A and other transactions, cybersecurity and data privacy, regulatory and compliance issues, employment, healthcare, and high-stakes disputes and litigation implicating these areas. Our Technology Litigation group is particularly skilled in handling complex civil litigation, commercial disputes, internal investigations, and regulatory compliance/enforcement matters. We leverage the strengths of our litigators and attorneys in other practices to meet the challenges presented by disputes over the development and application of leading-edge technologies.
