Heslin's Natural Gas-Electric Coordination Article Published

EnergyPulse

09.2013

Charlotte Litigation and Energy Member Brian Heslin was published by *EnergyPulse*, part of EnergyCentral.com, in September. His article, "The State of Natural Gas and Electric Interdependency: FERC's 2nd Quarterly Update on Natural Gas-Electric Coordination," is also expected to publish in the *EnergyPulse Weekly* e-newsletter in October.

"The second Quarterly Update reveals several common concerns that were at the heart of these regional and national efforts, including: the adequacy of natural gas infrastructure and pipeline capacity for gas delivery and storage, coordinating the operation of the gas and electricity markets to allow for more accurate and flexible scheduling of required amounts of natural gas for electric generators, allocation and recovery of costs associated with ensuring reliable electricity and natural gas resources, and increasing the communication between the industries to facilitate more seamless coordination, while observing applicable legal boundaries on such communication."

Energy Central is an online hub of information, products and services related to the energy industry. Heslin initially authored the piece as a blog post for his Energy Interdependency Blog.
